

# Project FeederWatch —

Nov 13 - April 30, 2022

Project FeederWatch turns your love of feeding birds into scientific discoveries. FeederWatch is a November-April survey of birds that visit backyards, nature centers, community areas, and other locales in North America. You don't even need a feeder! All you need is an area with plantings, habitat, water or food that attracts birds. The schedule is completely flexible. Count your birds for as long as you like on days of your choosing, then enter your counts online. Your counts allow you to track what is happening to birds around your home and contribute to a continental data-set of bird distribution and abundance.

**Instructional materials**, including double-sided bird identification poster, are mailed to first-time participants, and calendars are mailed to renewing participants, who opt to receive them. It takes several weeks for materials to arrive, but you can start getting ready for the coming season by reading our **online instructions**, and you can begin counting your birds when the season starts.

Observe the birds outside your windows and contribute to science by joining **Project FeederWatch**.

There is a small fee for participating/joining.
